

# Build The Autozapper Parasite Eliminator

It is my privilege to bring this special project to your attention. Before beginning, let me assure you that the following article will, in fact, describe the construction of a device which will eliminate many parasites, bacteria, and viruses from your body. I would recommend that you take the time to carefully read and understand this information which I am about to share with you. With proper use, you may greatly improve the condition of your own health or the health of your loved ones. With that in mind, let's take a look at some very necessary background information that you need to understand what is behind this interesting phenomenon !

## **ELECTRICITY AND LIFE**

Scientists have known for a long time that the human organism as well as other life forms are electro-chemical in nature. Without going into a long and detailed discussion about organic chemistry, it is safe to assume that most people know that life can be measured by chemical reactions in the human body. For example, we know that when you get excited (or drink too much coffee!) that your body can produce adrenaline and your metabolism is 'stimulated' to a higher level. In contrast, when you lay down at night, your brain releases a chemical called 'serotonin' which actually puts you to sleep.

These folks know that the central nervous system is also electro-chemical in nature. In this example, a 'stimulus' is sent through a chemical reaction to a nerve ending. The release of neurotransmitters (organic chemical compounds in the body) cause an electrical 'spark' to jump across the synapse of the nerve ending and send the signal to the appropriate part of the body. This is a very complicated process and is mentioned here only to show how electricity is used in the human body. And, of course, we all have heard about pacemakers; those little units that 'shock' the heart to keep it beating regularly to keep some people alive. The human brain also produces low frequency brain waves which are electrical in nature. They consist of the following four patterns and states of mind:

- 1) Alpha=relaxation
- 2) Beta=daily activity
- 3) Theta=meditation
- 4) Delta=sleep

Therefore, it is obvious that electricity has a great deal to do with life. We also know that electricity kills many people and animals each year. When a sufficient amount of current flows through the human body, the heart stops beating and the breathing stops also. Basically, an electrical current 'overloads' the natural electrical system of the body, causing it to 'short out' and the victim to die. For this reason, understanding the relationship between electricity and the human body has been shrouded with ignorance and fear for many years.

## **THE DISCOVERY**

As we discussed in the previous paragraphs, electricity can certainly kill living organisms. This fact has been known for a VERY LONG TIME. Even before Ben Franklin performed his now famous experiment with the kite flying in a thunderstorm, man knew that electricity was a powerful force to be harnessed! Since ALL ORGANISMS are electrical in nature, someone eventually stumbled into experimenting with electricity over the years and its effect on life. It was recently discovered that all living organisms emit electrical signals at their own specific frequency, at very low levels, of course! Does that mean that each of us is a 'miniature radio transmitter'? Yes, it does! But more importantly, as you are about to see, it holds the secret to life and death; specifically, when you want to kill the germs inside without harming yourself! Here's how it all happened.

## **THE CURE FOR ALL DISEASES**

I actually made this discovery by accident. I have an injury to my right hip, specifically, to the S I joint which connects the hip to the spinal column. I can assure you that it is very painful, especially when I am required to stand or sit for extended periods of time. I had seen an ad on TV for a push-button operated device called a 'zapper'. It's about the same thing you have on your bar-b-que grill that produces a spark to light your fire. It's just a piezo crystal that when struck mechanically, produces electricity. Anyway, since this 'zapper' eliminates PAIN, and I have had enough of THAT, I decided to try and find one at a local drugstore. They didn't carry this item and suggested that I try a health food store. At the second health food store, I asked the clerk if they carried 'zappers'. He said they didn't but they sold a book that told you how to build one! The name of that book is "THE CURE FOR ALL DISEASES" by Hulda Regehr Clark. ISBN # 1-890035-02-4 @ \$ 21.95.

This cell physiologist discovered that all living organisms produce electrical energy at their own specific frequency and by introducing this same frequency into that organism would cause it to DIE! What a discovery!!! She also made the discovery that a positive offset frequency of sufficient amplitude would simultaneously kill bacteria, parasites, and viruses in about seven minutes! The problem then became HOW to selectively electrocute these 'nasty critters' which find their way into our bodies without harming ourselves or others. We already know how harmful electricity can be in the wrong amounts and how beneficial it can be in the right amounts.

## THE DESIGN

I chose to design this project with a PIC 16C54 microcontroller chip from Microchip Technology. This little gem has the capability to take care of the control logic, timing requirements, frequency generation, and status indicators. The unit hardware consists of the PIC, a 4 Mhz. ceramic resonator, a voltage regulator, a miniature piezo buzzer, a red LED, a green LED, 3 resistors, and a power MOSFET transistor; it operates on a standard 9 volt battery. A pair of wires exits the unit which produces an ultrasonic frequency signal which you 'attach' to your hands. You can use an alligator clip soldered onto the wire and clip it back on the wire to form a loop. Then slide it over the hand between the fingers and thumb, making sure the loop is comfortably snug. Just make sure that the metal on the clip makes contact with your skin. Do the same thing with your other hand and you're ready to use! Or you can use an elastic conductive strap like the kind used to ground yourself against static electricity. This electrical signal which passes through your hands in this manner is all that is needed to 'kill off' the bugs in your body. Now, a little bit of information on how this unit operates and why all these features were needed.

## THE OPERATION

The unit described in the above mentioned book (which I would strongly recommend purchasing to gain a full understanding) was 'workable' but lacked several important features. First, the signal was weak and unstable because the frequency would drift with both battery voltage and load caused by different people's skin resistance. The individual would also need to undergo 3 properly timed 'zaps' with 2 properly timed 'rest' periods between. The reasoning behind this is as follows: Let say, for example, that your 'kitty' has picked up a pinworm, and inside that pinworm is a bacteria, and inside the bacteria is a virus! A parasite is an organism that lives off another LIVING ORGANISM, which for the sake of our discussion here means that somehow that pinworm got inside of you from your pet. Since each organism is inside the 'larger' organism, the first zap kills the host organism first. Now, before we go any further, don't misunderstand me and think that I am referring to you as a parasite! I'm talking about that pinworm!! The frequencies involved here are ultrasonic and the human frequency is between 1.5-9.5 Mhz. You won't be harmed by these frequencies and there is no danger of interaction with your body's own signals.

Anyway, after you kill that pinworm, it takes a little time for that bacteria to figure out it's inside a dead host. They really aren't all that bright, you know. It takes about 20 minutes to insure that the organism has left it's previous host and has entered into your body. Now, you zap a second time followed by a second rest period. Finally, you zap a third time and wipe out that virus (then again, assuming a worst case condition, but do you want to take a chance?). This may seem a little complicated to some people and we don't want anyone to be confused about a treatment which has positive therapeutic health benefits. So, a piezo buzzer beeps once when the unit is first turned on to test the unit, and then proceeds to operate as follows:

STEP 1=test beep<green LED on for 7 minutes>(first zap period)  
STEP 2=beeps 2 times<red LED on for 20 minutes>(first rest period)  
STEP 3=beeps 3 times<green LED on for 7 minutes>(second zap period)  
STEP 4=beeps 4 times<red LED on for 20 minutes>(second rest period)  
STEP 5=beeps 5 times<green Led on for 7 minutes>(third zap period)

When the third zap period is completed, both LED's are off and the unit will beep on and off continuously until it is turned off. Once the treatment is completed, I have learned from personal experience that a rest period or nap may be in order. You may also want to drink plenty of fluids to help flush out all the dead parasites from your body that have just been killed.

## **PERSONAL HISTORIES**

Please understand that I DO NOT encourage people with health problems by making false promises of some wonder cure. I don't sell 'snake oil' nor am I trying to exploit those in search of better health. However, I would like to offer the following personal testimonies from myself and others. I have personally used the unit to cure sinus infections, colds, and plugged nasal passages. Without trying to get too graphic, I would blow my nose and yellow mucus would appear indicating infection. After using the AUTOZAPPER my nostrils were completely unplugged and the mucus was clear with no sign of infection. This is valid scientific proof with real physical evidence to support it!

My friend, George, had developed a strep throat that hurt him so badly that he could hardly swallow. He used the unit once, and all his symptoms vanished and did not return. Two other friends, Mike and Rich, spent the weekend over on the California coast near Pismo Beach. Both had come in contact with Poison Oak and broke out in severe itching and blisters. Touching an infected area of your body can cause it to spread to other parts that you touch! Rich's condition was so bad that he was contemplating having to go to the hospital. They both used the AUTOZAPPER and their itching stopped immediately. Both men started to scab over and heal the same day. My friend, Pat, has severe carpal tunnel syndrome in his right hand. He wears an elastic brace constantly. He also suffers from a lot of back pain. I don't know exactly how or why, but the AUTOZAPPER has helped him with pain in both of these areas.

These testimonies are offered as fact from unbiased individuals who had no prior knowledge or expectation as to what would happen after using the AUTOZAPPER. Reactions have ranged from 'delightfully surprised' to utterly amazed'. That's why I am excited about sharing this information with you. I sincerely hope that you also may benefit from this unit and what it may be able to do for you too. I further encourage you to purchase the book and support someone who decided to publish this information to help humanity instead of exploiting a discovery to get rich, as many others do! Please don't let skepticism deter you from exploring something of such great consequence to your life!
