

# How to Cut Your Electric Bill AND Have Better Lighting

If you have  
one of  
these ...

A NEMA\* Light Fixture

\*National Electrical Manufacturer's Assoc.

Tell your electric utility  
(if you rent your light  
from them) that you  
want one of these...

NEMA fitted with a  
Hubbell "Skycap" shield

## Save enough to pay for a new refrigerator

Tests\* by Outdoor Lighting Associates, Inc. showed that a NEMA fitted with a Skycap put 47% more light on the ground in a 200 ft. diameter than without the Skycap. Glare is also reduced, improving your vision and your family's safety. Glare is reduced for neighbors too.

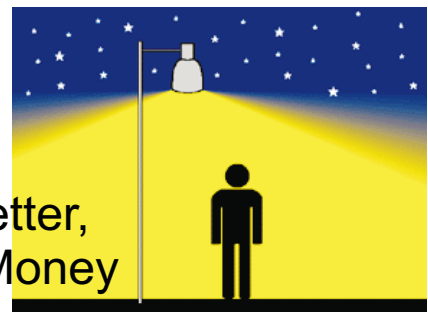

Redirecting scattered light means your property can be lit more brightly by a smaller bulb, reducing your electric bill about \$30 per year, even after paying pennies per month so the utility can recover the Skycaps' cost. Skycaps last over 20 years

***during which time you would save over \$600***

If you own your "NEMA" an electrical contractor can supply you with a Hubbell Skycap, or contact Outdoor Lighting Associates.

Are you paying for light that  
never hits your property?
